

# Prebona DuraClean™

## Consistently Clean

Roofs with concrete tiles get dirty over time. After washing and treatment with Prebona DuraClean, concrete roofs become strong and stay clean, dry and fresh for a long time.

*In total, 26 concrete roofs were cleaned and treated with Prebona DuraClean. The roofs get a longer lifetime and keep dry, clean and fresh for a long time after the treatment with Prebona DuraClean.*

24 houses and 2 garages in Sweden were built in 1985 and have roofs of concrete tiles, which have become dirty over time. In 2017 the roofs were cleaned and treated with Prebona DuraClean by BoaVista AB, a facility management company in Sweden. Prebona DuraClean strengthens concrete tiles and makes the surface dirt repellent, which results in the roofs remaining clean and fresh for a long time. Additionally, a clean and dry roof results in lower energy and maintenance costs, and increases the value of the property.

Prebona DuraClean gives a mechanically stronger roof compared to painting which mainly is an esthetical measure. Prebona DuraClean strengthens the tiles and increases the lifetime of the roof considerably. If one wishes to have a new color of the roof, it is possible to paint the roof after treatment with Prebona DuraClean. Treatment with Prebona DuraClean results in a longer lifetime of the roof, and the large expense of replacing the roof can be postponed for several years.

*"To us, it is important with a treatment that strengthens and thus increasing the lifetime of the roof. Eventually, we will paint the roofs in a couple of years, and then half of the work will already be done thanks to Prebona DuraClean" says president of the community.*
